

METHOD AND SYSTEM TO LINK ORDERS WITH QUOTATIONS

ABSTRACT

[0054] A computer-implemented method and system for linking a semiconductor product manufacturing facility order with one or more quotations are provided. A quotation including at least a first product and its quote amount is received and stored. A product manufacturing facility order that identifies at least the first product and desired quantity is also received. Then an order price associated with the first product calculated by accessing the stored quote amount associated with the first product, and determining the order price based on the quote amount associated with the first product and the desired quantity identified in the product manufacturing facility order.
